

ARTWORK REQUIREMENTS

If you have a particular colour that needs to be matched, please supply us with a physical sample or PMS number.

Vector artwork is preferred if possible.

Raster formats such as TIF or JPG needs to be a minimum of 72dpi at actual size, but at least 150dpi at actual size is preferred to maintain image quality.

All images must be embedded and **convert all fonts to outlines**.

Microsoft Office files, including PDFs made in Word, Publisher and Excel are not usable and will need to be redrawn.

We can accept artwork provided by you in any format from Adobe Illustrator, Photoshop, or Indesign as well as EPS and PDF from CorelDraw.

Bleed requirements vary depending on the products being made, but allowing 10mm each side will typically cover most situations.
